EXPERIENCE

Climate Change Coordination Centre Astana, Kazakhstan
Expert, Energy-Sector Modeling & Reporting (Contract) Mar 2026 – Present

- Owned the **energy sector**, the largest source in Kazakhstan's national greenhouse-gas inventory, in the country's first LEAP emissions projection model, with scenarios from 1991 to present.
- Co-authored a chapter of Kazakhstan's official **climate report to the UN**, and helped organize the national expert workshop behind it.
- Built the centre's public website, climate.kz — multilingual, SEO, now in production.

ASP-LAB, Nazarbayev University Astana, Kazakhstan
Research Assistant (part-time), Machine Learning & Signal Processing 2023 – Present

- Applied machine learning to wearable and genomic signal data (PyTorch, scikit-learn), and built computer-vision pipelines with YOLOv8.
- Containerized experiments with Docker for reproducibility, and added validation checks to catch overfitting on held-out data.

Head of Public Relations, Nazarbayev University (IEEE & Board Games Club) Astana, Kazakhstan
Brand, campaigns, and events 2022 – Present

- Led PR and brand for two university organizations, producing campaigns, social content, and event material (@nuieee_sb, @nu.boardgames).
- Promoted a **200+ guest** annual festival; tracked every campaign by attendance and iterated on what worked.

SELECTED PROJECTS

The Forge · game-balance system & self-play simulation Python, JavaScript

- Built a self-play agent (CEM) and a Monte-Carlo harness that validated game balance over **600 seeded matches**.
- The agent won **~85%** against four scripted bots and exposed a rules exploit they never used.

chitin-coast · year-long solo simulation of an emergent world Python

- Built a reproducible pipeline that generates terrain, climate, hydrology, and settlements, with a deck.gl 3D viewer. Solo, over a year.

Knee-rehabilitation exoskeleton · actuation & control lead (team of 5) Python, ODrive, Fusion

- Owned actuation and control on a 5-person team: sized the torque budget (~11 N·m, 2× safety), selected the actuator, and ran closed-loop position control over a 0–90° trajectory.

SKILLS

Product & Data: experimentation and metric-driven iteration, funnel / landing-page analytics, data modeling & analysis (Python, SQL), reproducible pipelines, specs & design docs

AI: daily LLM / agent tooling, prompt engineering, ML background (PyTorch, computer vision / YOLOv8, reinforcement learning)

Engineering & Design: Python, JavaScript / TypeScript, C / C++, Git; Figma, web & landing-page design, SEO, Blender (3D)

Languages: Kazakh & Russian (native), English (C1)

EDUCATION

Nazarbayev University — B.Eng. Electrical & Computer Engineering Aug 2022 – Jun 2026

GPA **3.5 / 4.0**, ranked **6 / 45**. Top-10 at the Higgsfield × AIESEC AI hackathon (LLM tooling).
